SUMMARY

Fresh Geological Engineering graduate from UPN "Veteran" Yogyakarta (GPA 3.59/4.00). Interned at Pusat Survei Geologi, Ministry of Energy and Mineral Resources, and completed a thesis on reservoir evaluation of the Lakat Formation, Central Sumatra Basin. Calculated petrophysical parameters for three wells in Interactive Petrophysics and interpreted lithology and facies in Petrel to identify prospective hydrocarbon intervals. Looking for an entry-level subsurface role in oil and gas, such as geologist, geoscientist, or petrophysicist.

EDUCATION BACKGROUND

Bachelor's Degree in Geological Engineering Aug 2022 – Jul 2026
Universitas Pembangunan Nasional "Veteran" Yogyakarta
GPA: 3.59/4.00
Undergraduate Thesis: *Study of Reservoir Characteristics and Identification of Hydrocarbon Prospect Zones Based on Petrophysical Analysis in the "SF" Field, Lakat Formation, Central Sumatra Basin*

TECHNICAL SKILLS & SOFTWARE

- **Petrophysical Analysis**: Well Log Interpretation | Multimineral Petrophysical Analysis | Reservoir Quality Evaluation
- **Geology**: Facies Analysis | Sequence Stratigraphy | Core Data Interpretation | Outcrop and Lithology Description | Geological Mapping
- **Software**: Interactive Petrophysics | Petrel | ArcGIS | Global Mapper | Dips | Leapfrog | Microsoft Office
- **Language**: Indonesian (Native) | English (Intermediate)

EXPERIENCE

Pusat Survei Geologi, Ministry of Energy and Mineral Resources (ESDM) Jan 2026 – Mar 2026
Bandung, Indonesia
Intern – Petrophysical & Subsurface Evaluation

- Evaluated reservoir quality of the Lakat Formation in three wells using multimineral analysis in Interactive Petrophysics, calculating clay volume, porosity, water saturation, and permeability.
- Applied cut-offs to determine net reservoir and prospective hydrocarbon intervals.
- Interpreted lithology and facies in Petrel using electrofacies and core data, and linked the results to the petrophysical analysis

Geological Mapping Project, UPN "Veteran" Yogyakarta Jan 2025 – Jun 2025
Nglanggeran area, Yogyakarta, Indonesia

- Mapped a 5 × 5 km area at 1:25,000 scale, recording 116 observation points with lithology descriptions and structural measurements
- Produced geological, geomorphological, and drainage pattern maps and measured stratigraphic sections, identifying three formations (Semilir, Nglanggeran, Sambipitu)
- Used petrographic and microfossil results to interpret the age and depositional environment of the mapped units

ORGANIZATION EXPERIENCE

Equipment Staff | Geological Engineering Orientation Program (PKKBN) Aug 2024
Yogyakarta, Indonesia

- Coordinated equipment preparation and logistics before and during the program

Event Staff | Sedimentology Field Excursion Dec 2023
Yogyakarta, Indonesia

- Assisted in planning and running field excursion activities for participants

Public Relation Staff | Geological Engineering Orientation Program (PKKBN) Aug 2023
Yogyakarta, Indonesia

- Coordinated communication between committee members and participants

CERTIFICATIONS AND TRAININGS

Fundamentals of Oil and Gas Exploration Aug 2024
PT. Alpha Petroleum Indonesia

ACHIEVEMENTS

Finalist – Poster Competition G-Expo 2025 Sep 2025
Geology Innovation for Future Energy Solution
Program Studi Teknik Geologi, Institut Teknologi Sumatera (ITERA)
